Metal Steel Shaking with HDF Board with Rivet technology.
This assembly system allows a higher sturdiness, easier assembly and longer durability. Safety use with no strap on patented junction plate. Heavy load capacity (250kg per level). It is the perfect metal shelving for keeping all items organised in the basement, garage, storage room, archive, warehouse, industry, or other business finishes. High-density fiberboards (HDF) with a polished surface finish. The edges of the boards are protected by the beams, which provides a longer durability of the product.
